Spokane Transit Authority transformed their agency from a pen-and-paper operations to a streamlined, electronic operations using state-of-the-art transit technology.

Background: A No. 2 pencil and a pad of paper – those were the transit technology tools that Spokane Transit Authority (STA) used for years. And like many agencies, they thought it was best to stick with what they knew. The only problem? It wasn't working in the fast-paced, technologically advanced world we now live in – that passengers demand we adapt to.

Challenges: Conducting next day scheduling and completing payroll with only a pencil and paper made STA's office operations inefficient. STA was looking for a solution that would automate these processes and reduce the amount of human error caused by doing everything manually.

Solutions: STA implemented Trapeze's OPS solution and are currently implementing TransitMaster Intelligent Decision Support (IDS) system which optimizes decisions taken by dispatchers and the reliability of transit service information. The system continuously monitors and analyzes data from vehicles and other external sources and proposes the right action for each specific moment, while transit-related information is communicated to passengers in real-time.

One of the biggest benefits of using Trapeze's solutions is their commitment to integration across their suite of products as well as with third-party solutions. "With multiple vendors, you never really know if everything will work together. I like that this has the capability to be integrated with everything else we have," said Krissy Ellis, Operations Specialist at Spokane Transit Authority. "It's also been great to work with Trapeze to customize the solution to our needs."

“ We used to print the master schedule, cross things out, add things up – now it's all done automatically, it's less prone to errors and the staff all love it.”

Spokane Transit Authority*

Results: As a result, Ellis noted they have saved hours of time – and money. "Building the extra board used to take most of an eight-hour shift. Before we used to have to take information from so many different places – but now it's all in one spot and it's a lot faster. Now we can put together the extra board work assignments in 2-3 hours," said Ellis.

The amount of time their staff spends on managing payroll has significantly declined. "We used to print the master schedule, cross things out, add things up – now it's all done automatically, it's less prone to errors and the staff all love it," said Ellis.

She hopes to continue the relationship with Trapeze for years to come. "The best thing about working with Trapeze is their willingness to always continue improving. We come up with ideas on why or how we want to do something differently and they're always willing to do it," she said.
