

State of Good Repair/Capital Planning

Total asset visibility with SGR. Make data-driven capital planning decisions.

Save time and money with this performance-based, full lifecycle approach to asset management and capital planning. Gain efficiencies and spend wisely with a line of sight across your assets. Supports FTA's SGR requirements (TAM Final Rule), asset condition taking, SGR score generation, capital project scoping and screening. Our transit-specific solution enables you to collect the vital, dynamic SGR and capital project data you need to effectively track asset performance throughout its lifecycle.

Tailor Made for Transit

Trapeze SGR makes it easy to monitor progress toward your SGR goals and to report reliable asset data to policy boards and federal regulatory agencies, including out-of-the-box NTD reports. Beyond condition ratings, our SGR module provides asset performance data over time and enables asset replacement and capital project planning.

“It's shaved off hours of work to gather data, process it and get it in a format we want so we can have our discussion on asset performance and replacement.”

- Ian Holme, TAM Manager, SMART

Top 3 Reasons

1→5

Monitor SGR Goals in Real Time

- Identify asset classes falling below your SGR threshold
- Track asset vital signs with decay curves, physical condition, performance -based scores

Transit Capital Planning

- Capital project prioritization
- Identify assets for refurbishment, replacement or system expansion
- Track capital projects across fleet, facilities and wayside assets

TAM Compliance Made Easy

- Single source of truth for analysis, audits and reporting
- Complete asset performance data
