

Enterprise Asset Management (EAM): WORK

EAM Mobile

Access EAM anywhere, on any device.

Optimized for tablets or smartphones, EAM Mobile makes it easy for your employees to manage fleet, facilities and wayside assets while on the move. Whether it's a rail supervisor, bus mechanic, facilities maintainer or track inspector, EAM Mobile puts your finger on the pulse of your assets so you can more quickly diagnose and resolve issues. Mobile works seamlessly in online and offline mode, so you can rest easy if you get disconnected (e.g. in a tunnel) knowing that data will synchronize as soon as your internet connection is restored.

Tailor Made for Transit

From work orders to asset updates, meter entries to inventory counts, EAM Mobile gets your work done fast and efficiently. The built-in linear reference and GPS location awareness enables your facilities and rail maintenance of way inspection crews to easily visualize and locate maintenance "hot spots," take pictures of defects, and track their findings on the work order.

EAM Mobile with access anywhere at anytime, was a critical factor in helping MARTA improve maintenance efficiency by 70%.

Top 3 Reasons

Gain Asset Insights in the Field

- Easily perform asset audits, or create new assets from templates, all from the palm of your hand (update attributes, capture lat/lon, etc.)
- View assets and work orders on an interactive map (street or satellite view); click on asset to begin workflow (e.g. create work order)
- Track asset condition rating and defects; take pictures of defects automatically synced to EAM, immediately alerting your operations and maintenance teams about a high-priority issue

Manage Warehouse Activities on the Go

- Request and issue materials; manage part label printing
- Perform random cycle counts
- Scan parts QR/barcode using device camera

Work Smarter

- Digitize all your core workflows: create work orders, labor capture, defect tracking, and notes. Get rid of the paper!
- Perform walk-around inspections with Mobile's tailored digital checklist functionality.
- Enter test results (e.g. wheel measurement, brake thickness) and automatically generate a service request or work order based upon values outside of the acceptable range, for true condition-based maintenance
